### Summary of Information

Site is a group of structures in a warm, bright, sunny area. Structures for the most part are white, constructed of masonry materials much like stucco on the outside, and generally with flat roofs. These structures are located on the highest point of a low, rolling hill, surrounded by other similar hills in an area that is dry and with clumps of trees and other green vegetation here and there. Near and to the rear of the main group of structures is another structure that is round and is full of water. Separate from the main group across a small swale is a further structure that seems to be newly constructed, perhaps of sheet metal; it is square and very functional in appearance. There has been other new construction in the immediate vicinity, along with a sense of recent prosperity, a business in the expansion phase. The structure of primary interest is set at an oblique angle to other structures in the complex; in front of it and neighboring structures is a semi-circular area that seems to be for vehicle parking. The primary structure inside is dim, cool, quiet, and virtually uninhabited. If there are any people present, there are only one or two, and they are incidental to the purpose of the structure (i.e., caretakers or watchmen).

There is a sense that this structure is "closed down" for the present, "waiting for the season to open," so to speak.
